

[ABSTRACT]

[Objects]

To delete the unnecessary work, the same CCD light sensor is used for pictures of stripfilm and slid mount.

[Components]

A film scanning device that includes:

the first opening was located at the body which for inserting the developed strip film;

the second opening was located at the body which is an exit for the strip film which was inserted into the first opening;

the third opening was located in front of the body which is for inserting and pulling out the slide mount following the direction vertical to the direction which the strip film was moved; and

a photographic sensor which took the pictures of the strip film was inserted from the first opening and/or the slide mount was inserted from the third opening; and

a projecting light which was used to project the pictures from the photographic sensor.
